

Walk-Forward R^2 per Test Window — N=50 assets, 9 windows (2018–2024)Aggregate R^2 

Aggregate MAE

EWMA/Persistence: observe p_t directly (information-set advantage). TGAT/TGN/ROLAND/GAT-Static: infer from event stream and graph structure only. Note: DCC-GARCH labels use full-sample (2018–2024) parameter estimates — a symmetric label-smoothness effect that benefits autoregressive baselines disproportionately.
